

• Company Overview

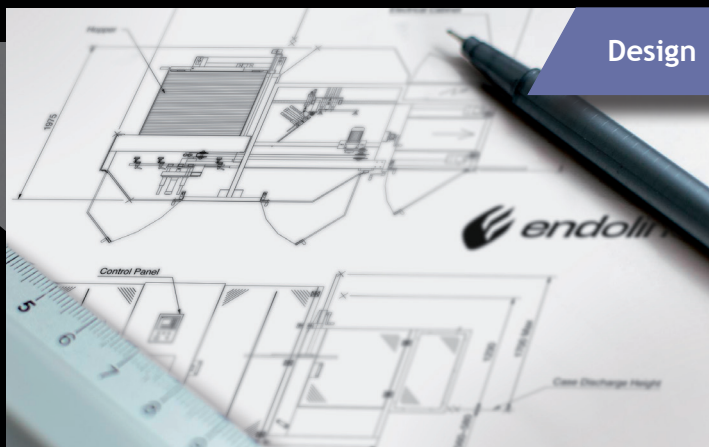

Endline Machinery Ltd •

For over 30 years, Endline Machinery has designed, manufactured and installed high quality end of line packaging machinery. From installing semi-automatic case erectors and tapers, to designing bespoke fully automatic high speed systems for global blue-chip manufacturers, the highly versatile Endline machinery range is unrivalled in terms of quality, performance, reliability and usability. Endline has built a reputation worldwide for supplying high quality versatile machinery offering a quick return on investment and a low cost of ownership.

Markets •

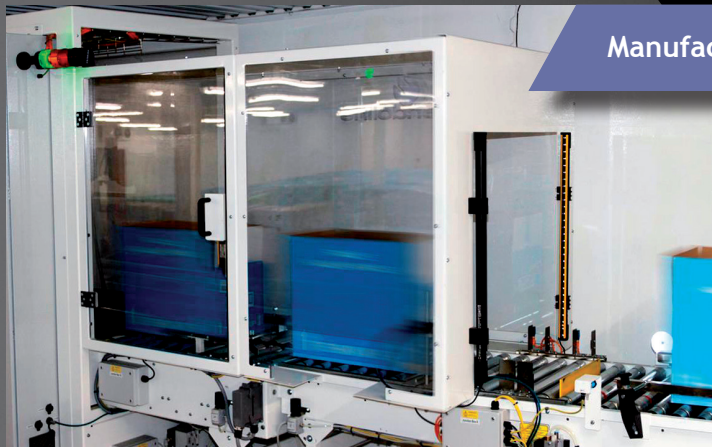

Endline are the UK's leading end of line machinery manufacturer, providing case erectors, case sealers, conveyor systems, case loaders and hand-packing stations to a wide range of customers to suit a wide range of applications. From snacks, biscuits, confectionery, ready meals, pharmaceutical and healthcare, to FMCG consumer goods, printing and consumer goods, Endline can offer a suitable solution. Endline also have an extensive distributor network of highly skilled partners to provide machinery, full support and services worldwide. Sales and service teams are trained by Endline experts to ensure that the highest quality is maintained across the globe.

Design •

Endline have a highly skilled dedicated design department who work with each customer to ensure their system is designed and built to their exact specification. The technical capabilities of this department has resulted in the creation and development of a number of innovative, high tech design features within the machine range. All this is achieved whilst ensuring the design meets individual customer specifications and to improve quality and efficiency whilst reducing cost and footprint.

Company Overview ●

Manufacturing ●

During the build of each system, Endoline's dedicated projects division will ensure that customers are kept updated with the progress of their machine while the quality and test department ensures the machine supplied is to the highest quality and to the correct specification. Endoline will also invite customers to carry out a full Factory Acceptance Test (FAT) at their offices to approve machinery ahead of delivery and installation. Endoline engineers will also work with board suppliers to ensure that a customer's chosen cases are to the right specification of the machine for consistent reliable 24/7 operation.

Installation ●

With an in-house team of service engineers who are expertly trained on Endoline systems, Endoline manages the complete installation process. The engineers provide full installation, training and offer ongoing support, while a professional after sales team can support any future technical issues. Endoline also have a large stock of spares available for next or same day delivery at their site. Service agreements are also available to ensure on-going high performance and reliability.

System and robotic integration ●

Endoline can integrate machinery to work with a customer's existing packing line or can manage the supply of a full turnkey packaging line. Endoline have strong relationships with a number of industry leading manufacturers and robotic systems specialists to enable the installation of the best possible solution, ensuring all the elements work harmoniously together to optimize productivity.
